# Ziyang Ye

yeziyang777@gmail.com

## OVERVIEW

- As a highly motivated and collaborative AI student specializing in AIGC, I boast a robust foundation in deep learning and computer vision. My expertise is honed through university research projects, where I independently oversaw the full lifecycle—from literature review and data processing to experiment design and model reproduction. I aspire to deepen my exploration in World Modeling, Generative Modeling and Embodied Intelligence.

## EDUCATION

- **Bachelor of Engineering in Software Engineering** **(Sep. 2023 - Jun. 2027)**
  Jilin University, China
  GPA: 88.56 (Ranking: 41/336)
- **Awards:** 2024 Second-Class Scholarship (15%), Outstanding Student Leader; 2025 Second-Class Scholarship (10%), Academic and Technological Award

## SKILLS

- **Foundational Skills:** Familiar with data structures, basic algorithms and C/C++; solid in calculus, linear algebra and probability theory; with a foundation in machine learning and deep learning.
- **Technical Tools:** Skilled in Python (automated scripting, OpenCV/PIL for image processing); experienced with PyTorch, understanding Transformer/Diffusion/ViT/VLM principles, and model tuning.
- **Research & Experimentation:** Proficient in experimental design, evaluation metrics application; familiar with Git and Linux; capable of academic writing and LaTeX.
- **Academic Literacy:** Strong at systematic literature research and field context analysis; able to independently complete full experiment workflows, reproduce mainstream models, and develop innovations.

## RESEARCH EXPERIENCE

- **Research Assistant** **Dec. 2025 – Present**
  The Chinese University of Hong Kong, Shenzhen (CUHK-SZ), China
  Supervisor: Prof. Li Jiang
  Primary research focuses on **Video World Models** and **Embodied AI's World Action Models (VA)**, with related work recently **submitted to ICML 2026**.
- **Research Intern** **Mar. 2025 – Oct. 2025**
  IIGG Group, School of Artificial Intelligence, Jilin University, China
  Supervisor: Prof. Xi Yang
  - **Outline:** Focus on sketch appearance transfer; aim to boost effectiveness and controllability of image appearance transfer via improving existing diffusion-based methods and exploring new model architectures.
  - **Key Responsibilities & Achievements:**
    * Reproduced mainstream appearance transfer frameworks, designed and implemented a DiT-based scheme (Flux/ControlNet/SAM/DINO), achieving results that outperformed SOTA methods in core metrics (DINO, CLIP, SSIM).
    * Developed explicit style disentanglement methods, laying a foundation for accurate style-content separation and more controllable appearance transfer.
    * Conducted systematic literature research and independently completed full experiment workflows.

## PUBLICATIONS
